SUMMARY

DevOps/Platform Engineer with hands-on experience designing and operating cloud infrastructure on AWS and Azure, building and managing Kubernetes clusters (EKS/DOKS), implementing CI/CD pipelines, and establishing observability and DevSecOps practices. Experienced in Infrastructure as Code with Terraform/OpenTofu, container orchestration with Docker and Helm, secrets management, RBAC/IAM policies, and production incident response. Strong background in Linux systems administration, networking, security automation, and cross-functional collaboration in Agile environments.

EDUCATION

Westcliff University Jan 2025 - Dec 2026
Masters in Computer Science, Minor in Data Analytics *Irvine, CA*

Osmania University Aug 2020 - July 2024
Bachelors in Computer Science *Hyderabad, India*

EXPERIENCE

DevOps / Platform Engineer Mar 2025 - Present
We Own *Denver, CO*

- Designed and operated Kubernetes clusters (DOKS/EKS) hosting 20+ self-hosted applications using Helm charts and ArgoCD for GitOps-driven deployments, reducing deployment inconsistencies by 80% and eliminating manual release processes
- Provisioned and managed cloud infrastructure on AWS and DigitalOcean including VPCs, subnets, security groups, IAM roles, EC2 instances, S3 buckets, Route53 DNS, and load balancers using Terraform/OpenTofu with remote state management and encrypted storage
- Built and optimized CI/CD pipelines using GitHub Actions and GitLab CI for automated testing, container image builds, security scanning, and deployment to Kubernetes environments, reducing deployment times by 70%
- Implemented full-stack observability using Prometheus, Grafana, and Loki for metrics, dashboards, and centralized log collection; configured alerting rules and SLI/SLO monitoring to maintain 99.9% service availability
- Configured SigNoz with OpenTelemetry collectors for distributed tracing across microservices, enabling end-to-end request tracing and reducing mean time to detection (MTTD) by 50%
- Managed Kubernetes operations including Deployments, StatefulSets, DaemonSets, Services, Ingress Controllers, ConfigMaps, Secrets, PVCs, Namespaces, ServiceAccounts, NetworkPolicies, liveness/readiness probes, resource requests/limits, and HPA autoscaling
- Centralized secrets management using Infisical and AWS Secrets Manager with environment-scoped access controls, implementing secrets rotation and eliminating plaintext credentials from repositories and CI pipelines
- Enforced DevSecOps practices including container image scanning with Trivy, RBAC/IAM least-privilege policies, TLS/mTLS service-to-service encryption, vulnerability scanning, and audit logging across all environments
- Managed incident response as first responder for production issues, conducting root cause analysis, writing post-mortems, and documenting rollback/recovery procedures with defined RTO/RPO targets; prepared operational runbooks reducing onboarding time by 40%
- Diagnosed and resolved a silent container networking failure caused by shared Docker network namespaces, troubleshooting complex networking issues across VPC peering, NAT gateways, and container bridge networks
- Automated infrastructure provisioning and server configuration using Ansible and Python/Bash scripts, streamlining repeatable deployment workflows and cutting manual effort by 40%
- Partnered closely with development, security, QA, and infrastructure teams to create deployment plans, conduct design reviews, and improve platform reliability in an Agile environment with sprint planning and code reviews

Junior DevOps Engineer Sep 2022 - Jan 2025
ZIT Solutions *Hyderabad, India*

- Built and maintained CI/CD pipelines using GitHub Actions, GitLab CI, and Azure DevOps for automated testing, container image builds, validation, and deployment across Linux-based environments, reducing deployment time by 60%

- Provisioned AWS infrastructure using Terraform including VPCs, EC2, IAM, S3, RDS, and security groups for development and staging environments, following Infrastructure as Code best practices
- Automated Linux server provisioning, configuration, and system-level tasks using Bash, Python, and Ansible, writing installation scripts and configuration playbooks for repeatable production workflows
- Configured monitoring and centralized log analysis using Prometheus, Grafana, and ELK stack across Linux systems, supporting troubleshooting and incident response with 99.9% uptime
- Managed Docker container lifecycles including image builds, private registry management, multi-stage builds, and container troubleshooting across development and production environments
- Supported PostgreSQL and Redis database operations including provisioning, backup/restore procedures, performance monitoring, and high-availability configurations

Security Infrastructure Engineer Jul 2024 - Aug 2024
Hyderabad City Police *Hyderabad, India*

- Managed secure forensic data infrastructure with encrypted data transmission across distributed systems, implementing access controls and least-privilege security policies
- Automated data extraction and analysis pipelines using Python, reducing manual processing by 50% and improving forensic data integrity
- Configured and maintained security tools including UFED, XRY, and Elcom-Soft with audit logging and role-based access controls

PROJECTS

AWS EKS Production Platform | AWS, EKS, Terraform, Helm, Prometheus, GitLab CI

- Designed and deployed a production-ready AWS EKS cluster with Terraform including VPC with public/private subnets, NAT Gateway, Internet Gateway, ALB Ingress Controller, and Route53 DNS with TLS certificates via ACM
- Configured Kubernetes workloads with Deployments, StatefulSets, Services, Ingress, ConfigMaps, Secrets, PVCs, resource limits, liveness/readiness probes, and HPA autoscaling for 15+ microservices
- Implemented CI/CD with GitHub Actions and GitLab CI for automated builds, container scanning with Trivy, artifact registry pushes to ECR, and blue-green deployments to EKS with automated rollback
- Set up Prometheus, Grafana, and Loki monitoring stack with custom dashboards, alerting rules, and SLO tracking; integrated AWS CloudWatch for infrastructure-level metrics and billing alerts
- Managed secrets using AWS Secrets Manager with External Secrets Operator syncing to Kubernetes, implementing automatic rotation and least-privilege IAM policies

DevSecOps Pipeline Automation | Trivy, GitLab CI, Vault, RBAC, Container Security

- Built an end-to-end DevSecOps pipeline integrating SAST, container image scanning (Trivy), dependency vulnerability checks, and infrastructure compliance validation into CI/CD workflows
- Implemented HashiCorp Vault for centralized secrets management with dynamic secret generation, automatic rotation, and audit logging across Kubernetes and CI/CD environments
- Configured Kubernetes RBAC with least-privilege ServiceAccounts, NetworkPolicies for pod-to-pod traffic control, and PodSecurityPolicies enforcing non-root containers and read-only filesystems
- Automated CIS Benchmark compliance checks for AWS infrastructure and Kubernetes clusters, generating audit reports and remediating findings through Infrastructure as Code

Multi-Cloud Infrastructure as Code | Terraform, OpenTofu, AWS, Azure, GitHub Actions

- Automated provisioning of 10+ cloud resources across AWS and Azure including Kubernetes clusters (EKS/AKS), VMs, VPCs/VNets, subnets, security groups/NSGs, databases (RDS/Azure SQL), DNS, and networking components using Terraform/OpenTofu
- Implemented remote state management with S3/DynamoDB locking and encrypted storage, with automated plan/apply workflows in GitHub Actions reducing manual infrastructure changes by 80%
- Standardized multi-cloud infrastructure through reusable Terraform modules with environment-specific variable files, enabling repeatable environment creation across dev, staging, and production
- Configured Azure DevOps pipelines for build validation and release automation alongside GitHub Actions, with integrated approval gates and infrastructure drift detection

Container Networking and Deployment Automation | Docker, Caddy, Linux, Bash

- Root-caused a silent networking failure in multi-container deployments traced to shared Docker network namespaces losing connectivity on restart; implemented fix using separate bridge networks with reverse proxy DNS resolution
- Built reusable deployment templates with parameterized configuration for containerized AI agent infrastructure, reducing environment provisioning from days to under 30 minutes
- Documented disaster recovery and rollback procedures including backup/restore workflows, RTO targets, and failover validation for stateful containerized services

CERTIFICATIONS

Cisco Certified Network Associate (CCNA) - Cisco | Cisco DevNet Associate - Cisco | Google Foundations of Cybersecurity - Google

TECHNICAL SKILLS

Cloud Platforms:	AWS (EC2, EKS, VPC, IAM, S3, RDS, ALB/NLB, Route53, CloudWatch, Secrets Manager, ACM, ECR), Azure (AKS, VNets, Azure SQL, Key Vault, Azure DevOps, App Service, Azure Monitor)
Containers & Orchestration:	Kubernetes (EKS, DOKS, AKS), Docker, Helm, ArgoCD, Deployments, StatefulSets, DaemonSets, Ingress, ConfigMaps, Secrets, PVC/PV, HPA, NetworkPolicies, RBAC
IaC & Automation:	Terraform, OpenTofu, Ansible, Bash, Python, CloudFormation
CI/CD:	GitHub Actions, GitLab CI, Azure DevOps, Blue-Green Deployments, Canary Releases, Automated Rollback
Observability:	Prometheus, Grafana, Loki, SigNoz, OpenTelemetry, ELK/OpenSearch, CloudWatch, Uptime Kuma, SLI/SLO Monitoring
DevSecOps & Security:	Trivy, Vault/OpenBao, Container Image Scanning, SAST, RBAC/IAM, Least Privilege, TLS/mTLS, DKIM/DMARC, Secrets Rotation, CIS Benchmarks, Audit Logging, Infisical
Networking:	VPC/VNet, Subnets, NAT Gateway, Internet Gateway, VPC Peering, Transit Gateway, VPN, Security Groups/NSGs, DNS, Load Balancers (ALB/NLB), Ingress Controllers, Caddy, Reverse Proxy
Databases & Data:	PostgreSQL, Redis, Azure SQL, SQL Server, RabbitMQ/Kafka (familiar), Backup/Restore, Replication, Performance Tuning
Languages:	Python, Bash, SQL, Golang (familiar), TypeScript
Operating Systems:	Linux (Ubuntu, CentOS, Amazon Linux), Windows Server
